

## Aim

The Trust's objective is to provide an above average level of income, income growth and long-term growth of capital through a policy of investing mainly in higher yielding UK FTSE 100 companies.

## Risks & Features

Investment trusts are quoted companies listed on the London Stock Exchange. Their share prices are determined by factors including the balance of supply and demand in the market, which means that the shares may trade below (at a discount to) or above (at a premium to) the underlying net asset value.

Merchants seeks to enhance returns for its shareholders through gearing, in the form of long-term, fixed rate debentures. Gearing can boost the Trust's returns when investments perform well, though losses can be magnified when investments lose value. You should be aware that this Trust may be subject to sudden and large falls in value and you could suffer substantial capital loss. Derivatives are used to manage the trust efficiently.

## History

The Trust was incorporated in February 1889, making it the oldest of the investment trusts in the RCM stable. Initially it principally invested in the fixed interest securities of railway companies in the USA, Canada and South America, with the remainder held in Government securities and companies such as Castlemaine Brewery in Western Australia. The Trust now concentrates primarily upon major UK companies with an above average rate of dividend yield.

## Fund Manager's Review

Simon Gergel

After a strong start to the year, equity markets sold off sharply as the Chinese authorities tightened lending policy to slowdown credit growth. There were also sovereign credit risk concerns raised in Greece and proposals from President Obama to raise a levy on banks and to force a separation of certain trading activities. Economic news was mixed with the UK only just emerging from recession in Q4 2009 but the US posted strong growth despite relatively soft housing and employment data.

Overall the FTSE 100 fell by 4%, led down by mining and retail stocks, with technology and engineering seeing the biggest gains. The portfolio performed in line with the benchmark, which on the upside, was helped by a low exposure to mining and gains in the electricity sector. The biggest stock contributors to performance were SSE which outperformed and not owning Anglo American and Rio Tinto which fell back. The biggest negative contributors were Man Group which underperformed and not owning BG and Imperial Tobacco which both rallied.

There were no new holdings added to the portfolio in the month. The main activity was taking money out of shares that had performed well and thus looked less attractive, such as HSBC and IG Group to build up positions in cheaper businesses such as Balfour Beatty, British Land and Home Retail Group. Whilst economic conditions are broadly improving, we believe a high debt overhang limits the scope for strong economic growth. Differentiation between companies rather than sectors is likely to be more important in a slow economic environment. Valuation could be a more important driver of stock performance as well as other fundamentals like business quality and competitive advantage. The portfolio has a high exposure to large, well capitalised companies with strong cashflows, low valuations and high dividend yields.

<sup>2</sup>Source: Datastream as at 29.01.10. Calculated using the latest full year dividend divided by the current share price.

<sup>3</sup>A trust's net asset value (NAV) is calculated as available shareholders' funds divided by the number of shares in issue, with shareholders' funds taken to be the net value of all the company's assets after deducting liabilities. In line with current industry best practice NAVs are now shown to take into account the 'fair value' of debt. This means NAVs are calculated after allowing for the valuation of debt at fair value or current market price, rather than at final repayment value. NAVs with debt at market value provide a more realistic impact of the cost of debt, and thus a more realistic discount. It is the capital NAV that is shown, which excludes any income.

Benchmark: FTSE 100 Index

Standardised past performance figures comply with the Financial Services Authority's regulations to enable investors to compare different products from different providers.

Past performance is not a reliable indicator of future performance. You should not make any assumptions on the future on the basis of performance information. The value of an investment and the income from it can fall as well as rise as a result of market fluctuations and you may not get back the amount originally invested.

This investment trust charges 65% of its annual management fee to the capital account and 35% to revenue. This could lead to a higher level of income but capital growth will be constrained as a result. Your capital could also decrease if income paid out of capital exceeds the growth rate of the trust.

## RCM Advantage

RCM and its predecessors have been managing investment trusts since 1889, providing investors with access to investment markets around the world through professionally managed portfolios. Each trust benefits from the expertise of the RCM fund managers yet, as a company listed on the London Stock Exchange, it is independent and is overseen by its own Board of Directors.

RCM is the global equity specialist within Allianz Global Investors. With offices strategically located in the US, Europe and Asia, RCM uses its global research platform to search out investment opportunities.
